Continuation Sheet (PTOL-303)

Continuation of 2. NOTE: Previously submitted claim 1 was directed to an evaluation apparatus and method for acquiring numerical data showing a state of a generic biological sample, whereas newly proposed amended claims 1 and 6 involves a biological sample "including" a cell having a linear structure extending from a main body of a soma. This newly proposed limitation differs even from the previously submitted claims 5 and 10 which were directed to a biological sample that "is" a cell. Because the biological sample in the proposed amended claims 1 and 6 is different from what was previously claimed, these amendmenst raise new issues. This similar issue also occurs in proposed amended claims 11 and 15, respectively. The added limitation of "deleting the linear structure from the image of the biological sample" in proposed amended claims 1, 6, and 11 raises a new issue. The limitation involving the determination of "a number of main bodies, as a number of somas" as stated in proposed amended claims 1, 6, and 11 raises a new issue. The limitation wherein the length is that of the linear structure as stated in proposed amended claims 5, 10, and 15 raises a new issue.

Continuation of 5. does NOT place the application in condition for allowance because: the presence of new issues which would require further consideration and search. In addition, the proposed claims with amended limitations do not place the application in better form for appeal. Because the amendment will not be entered, all previous objection and rejections are maintained. If the proposed amendment had been entered, the claim objection; the 35 USC 112, first paragraph NEW MATTER rejections; the 35 USC 112, second paragraph rejections; and the 35 USC 102 rejection would have been overcome. A further search would be required to determine if the 35 USC 103 rejections would be maintained due to the presence of new issues.
